THERMALRITE'

Walk-in coolers and freezers engineered and built to customers' exact dimensions and specifications with flexible design and modular construction to help you maximize operational efficiency.

CROWNTONKA®

engineered for flexible sizing and

merchandising.

configuration to optimize storage and

Custom walk-in coolers tailored for convenience stores, florists, groceries, liquor stores, and warehouses,

One-piece walk-in freezer or cooler for indoor or outdoor use, quick to install with seamless construction that minimizes downtime and gets cold storage running within hours.

Precision-engineered cold storage units designed for controlled environments. These chambers offer customizable temperature and humidity settings, and antimicrobial surfaces for industries such as healthcare, laboratories, agriculture, and mortuary services.

LOTEMP DOORS®

Innovative and cutting-edge cold storage doors, including sliding, swing, and overhead models, with a fully customizable product line for both interior and exterior applications. Each door is engineered with durability and flexibility to meet the unique needs of your facility.

ReFresh quickly restores walk-in coolers and freezers with efficient upgrades to floors, panels, and doors, compatible with any manufacturer and designed to extend unit life with minimal disruption.

LINE CARD

Everidge's mobile cold storage units provide cooler or freezer functionality with adjustable temperatures from 0°F to 50°. Offered in three sizes and powered by standard 120V or optional inverter generators, they're ideal for catering, schools, emergency response, and outdoor use.

Blast chiller/freezer units with ambient chill and indirect air circulation rapidly reduce food temperatures while preserving quality. Available in standalone and roll-in models, they suit various batch sizes and kitchen workflows.

SMARTRITE[®]

Advanced monitoring system for walk-in coolers and freezers, offering real-time temperature, humidity, and alarm tracking via cloud connectivity to streamline operations and ensure HACCP compliance.

Everidge UV Pro is a compact, wallmounted UV-C disinfection system designed for walk-in coolers, reducing airborne and surface pathogens, odors, and ethylene gas to extend shelf life and improve food safety.

Construction Services

A direct line to a designated highly experienced project management team creates efficiency and streamlined communication. Every step of the way.®
